We Make Your IT Mobile

# What is **synko** BarScan?

**synko BarScan** is the scanning solution integrated into the Microsoft Dynamics 365 Business Central (Microsoft Dynamics NAV) platform.

**synko BarScan** enables your employees to collect the information with mobile scanners where they are generated – by means of the simply scanning of 1D and 2D bar codes of any formatting, or the reading of RFID tags.

## Where is **synko** BarScan used?

### In Inventory Management

**synko BarScan** enables you to record delivered inventory into incoming goods. A fully automated incoming goods inspection is compared against the orders existing in Microsoft Dynamics 365 Business Central (Microsoft Dynamics NAV). The required labeling can be produced and printed with **synko Labeling** directly after receipt of incoming goods.

The storage of goods at the storage site is registered with scanners. Additional information concerning the scanned article can be collected, such as batch and serial number, production date, goods receipt, quality characteristics and much more. In commissioning, the employees are supported through control of the scanned product. **synko BarScan** checks whether scanned volumes, article numbers or quality criteria meet the required specifications.

### In Production

With the **synko BarScan** operations data collection, your employees record the data directly at their production work place. Thus, reported process times, finished goods amounts, consumption or scrap quantity are available in near real time in your Microsoft Dynamics 365 Business Central (Microsoft Dynamics NAV) system. This eliminates duplicate data collection, first in the paper format of recording forms and then the tedious entering of same into the system.

### Cash Sales

In factory sales, your employee records the goods immediately upon commissioning same for the customer at the counter. The customer receives delivery receipt and invoice at the touch of a button on the scanner.

# What are the benefits of **synko** BarScan?

BarScan

100% Control For Your  
Merchandise Management

## synko BarScan is easy to learn

This is achieved through a revolutionary operating concept that uniquely combines the operation of scanners via menu navigation (also in flow surfaces) and scanner handling. Experience shows that within a very short time (a few hours) employees work efficiently with **synko BarScan**. Handling is the determining factor for the successful implementation of a scanner system. **synko BarScan** finds acceptance by employees with great enthusiasm.

## synko BarScan creates security

The various automated checks, which support the tasks of your employees online, lead to a perceptible reduction of errors. In our projects we can observe a drastic reduction of erroneous deliveries. Our customers often experience a zero inventory difference at the end of the year. This confirms that if **synko BarScan** is consistently utilized the inventory in Microsoft Dynamics 365 Business Central (Microsoft Dynamics NAV) is exactly reflected.

## synko BarScan is fast

The fact that **synko BarScan** communicates online with Microsoft Dynamics 365 Business Central (Microsoft Dynamics NAV) allows staff to access current data much faster, thus supporting their decision in both directions. The information, for example, as concerns a batch blocked by quality control is available in the scanner system without any further communication effort. A warehouse worker, who wants to commission blocked goods, will immediately be alerted when he/she starts the next scan process. On the other hand, if a batch is subsequently blocked, the quality control staff can, without delay, determine where blocked goods are commissioned – at the touch of a button and without large-scale telephone or mailing activities.

## synko BarScan is flexible

Although **synko BarScan** offers you a scanner system, which as been perfected over the years and covers almost all requirements, it may become necessary that adjustments are required. **synko BarScan** is an application based upon **synko Mobile**. With the graphical design interface your requirements can be realized quickly. The adjustments are carried out centrally and are simultaneously available to all users at a specific time chosen by you – if necessary worldwide.

## synko BarScan is transparent

The prompt collection of inventory data and associated features create a completely new transparency in your warehouse. The inventory age and production dates are easy to monitor. In such fashion maintaining FIFO is assured.

We would be more than happy to show the benefits for your company in a personal presentation.
