WHAT IS SYNKO LABELING

synko Labeling is the solution for all labeling tasks within your business based upon Microsoft Dynamics NAV. With **synko Labeling** you can label your entire inventory with 1D and 2D or RFID labels. The bar codes on the labels can of course be combined. By defining different label formats, which, for example, are subject to article type, product groups, packaging type, customer, etc., you can identify your articles fully according to your wishes.

You can use **synko Labeling** for inventory shelf labels and customer labels.

The print manager of **synko Labeling** controls the printing of labels on all types of printers with Window drivers (label printer, laser printer (if labels are printed in sheets), RFID printer). You can access the entire printer fleet as well as feed several printers with printing tasks simultaneously.

WHERE IS SYNKO LABELING USED

IN THE LOGISTICS INDUSTRY

The classic application range for **synko Labeling** is in internal logistics as well as for the labeling of goods according to customer specifications. In addition, certain industries request the complete and continuous tracking of labels. It must be clearly evident which labels were printed in which volume, or whether certain labels were printed but not used. With **synko Labeling** and Microsoft Dynamics NAV you always have the proper tools at hand.

WHAT ARE THE BENEFITS OF SYNKO LABELING

SYNKO LABELING IS FLEXIBLE

synko Labeling comes with a variety of predefined label formats. Naturally, all label formats can be modified according to your specifications.

Or you simply create new label formats.

SYNKO LABELING CREATES TRANSPARENCY

Thanks to the comprehensive tracking of labels in Microsoft Dynamics NAV you have confirmation of the use of your labels available at any time.

This feature provides you with amazing new opportunities for the monitoring of your inventory.

We would be more than happy to show the benefits for your company in a personal presentation. Challenge us!
