WHAT IS SYNKO MOBILE

With **synko Mobile** you have access to your IT data at anytime from anywhere. **synko Mobile** is available for iOS (iPhone, iPad), Android or Windows mobile / Windows phone.

Data can originate from your ERP system, for example Microsoft Dynamics NAV or from other data bases or data files (e.g. Excel). It is irrelevant whether you operate your IT within your company or prefer a cloud solution.

synko Mobile brings together data from different data sources and makes them available online, for both reading and for writing. **synko Mobile** can thus be comprehensively integrated into your existing IT-solutions.

WHERE IS SYNKO MOBILE USED

INTERNALLY

A classic internal application is, for example, **synko BarScan**. With mobile scanners, your employees collect the information where such are generated, e.g. in production (consumables, actual status, time recording) or in stores (incoming goods, at time of storage or during commissioning). Thanks to online communication, **synko Mobile** can check the entries immediately and – if need be – send the user warnings, error messages or other information.

EXTERNALLY

Each task, for which employees need to have access to current business data, e.g. in sales (current customer statistics, order status...), or consultative sales of sophisticated items which must be configured on-site. **synko Mobile** can access the internal product configurator, thereby supporting the employee on-site. Service technicians can enter the necessary times on-site, and can check spare parts lists and availabilities. Craftsmen can record rendered services on-site (on-site measurements).

Upon recording, all data are instantly available in the central IT of the enterprise. It couldn´t be easier!
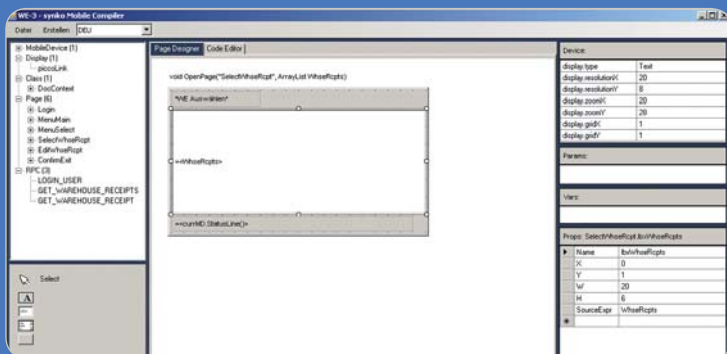

WHAT ARE THE BENEFITS OF SYNKO MOBILE

SYNKO MOBILE IS FAST

The transfer of data works for example via Wi-Fi (if mobile devices are used) or via mobile networks (UMTS, EDGE, GPRS,....). The transmission standard is designed in such a fashion that only a low bandwidth is required for the transfer. Even low bandwidth (such as EDGE or GPRS) provides fast reaction times.

SYNKO MOBILE IS EASY TO LEARN

Using **synko Mobile** is intuitive. The modern user flow interfaces are continuously supported. Every employee who can use a smartphone can also operate **synko Mobile** applications.

SYNKO MOBILE IS EASY TO LEARN

The integrated graphical development environment allows any required changes to be made quickly. As soon as the change is activated it is immediately available to all mobile staff. Installation of such changes into the individual smartphones is not required – data and the application are always current.

We would be more than happy to show the benefits for your company in a personal presentation.
